Experience

Wayfair
Software Engineer II
Custom Logistics / EDI
December 2019 - Present

- Work on a highly cross functional team to integrate large appliance suppliers such as Electrolux.
- Collaborated on technical spec contracts with a high volume ocean ship carrier.
- Worked with EDI and API teams to seamlessly integrate with partner platforms.
- Manage and monitor platforms for stability, reviewing source code, metrics and logs to quickly pivot to solve production issues.
- Created a feature for the EDI team to create ingress to egress file transfers saving 250 engineer hours per year.
- Introduced use of Graphql API's in teams python microservices.

Wayfair
Software Engineer
Custom Logistics
October 2018 - December 2019

- Work on a highly cross functional team to integrate large appliance suppliers such as Samsung and GE.
- Deploy agile methodologies to improve workflows for integrating 3rd party suppliers, reducing developer time from 500 to 200 days.
- Utilize TDD principles when building customer and employee facing features with PHP and Javascript.
- Refactor database interaction to display accurate information to both customer and employee facing platforms. This directly led to order retention saving over 200k dollars year over year.
- Use postman to hit custom API endpoints, both for testing and writing efficient code.
- Develop a new platform for implementation of integration logic without increasing load times.
- Dynamically create several thousand SQL insert statements to use for shipping eligibilities by zip code coverage zones.

App Academy
Bootcamp Prep Instructor
March 2018 - October 2018

- Lead instructor for live class on introductory computer science concepts using JavaScript.
- Managed curriculum schedule and topics.
- Provide one on one code reviews and grade assessments .

Skills

Frontend	Backend	Miscellaneous
